Exercise 7

Topic in this week is very important and it might be hard to understand at beginning. However, the exercise of this week is not difficult. All about methods. Do more practice to get familiar with the procedure of writing a class (constructor, attributes and method in each class). The skeleton is given on LMC and all you need to do is fill the blank in all empty methods. Follow task sheet carefully and understand the parameters for each method and the return type or output of each method
